# Svět preprintů

# Co jsou preprinty a kdo je sdílí?

Verze vědeckého článku před recenzním řízením / finální autorský manuskript

Součást tzv. šedé literatury

S příchodem internetu snadné a méně omezené sdílení

Ochota sdílet preprinty se (oborově) liší, často v závislosti na:

1. individuálních preferencích autora
2. míře otevřenosti oborové komunity
3. politikách vydavatelů a poskytovatelů financí
4. existující infrastruktura

# Individuální motivace

*"Preprints are useful in science as results are published very **quickly** and they prevent reviewers from feeling tempted to copy ideas or reproduce experiments on the basis of the assigned manuscripts to review."*

zdroj: Esther Barreiro (IMIM) - *Preprints and the long and winding road to Open Access* ([link](#))

*"The strongest benefit I see is that papers in bioRxiv can be included in the CV. So, that's good when applying for grants and when PhDs and postdocs want to apply for a position."*

zdroj: Iñaki Ruiz-Trillo (IBE: CSIC-UPF) - *Preprints and the long and winding road to Open Access* ([link](#))

# Preprintové **komunity**

Jaderná fyzika a [arxiv.org](https://arxiv.org)

Ekonomie a [repec.org](https://repec.org)

Biologie a [biorxiv.org](https://www.biorxiv.org)

# Politiky vydavatelů a poskytovatelů financí

**Notice Number:** NOT-OD-17-050

## Key Dates

**Release Date:** March 24, 2017

**Effective date for application:** Applications submitted for the May 25, 2017 due date and thereafter

**Effective date Research Performance Progress Report (RPPR):** RPPRs submitted on or after May 25, 2017

## Related Announcements

[NOT-OD-17-006](#)- Request for Information (RFI): Including Preprints and Interim Research Products in NIH Applications and Reports

## Issued by

National Institutes of Health ([NIH](#))

## Purpose

The NIH encourages investigators to use interim research products, such as preprints, to speed the dissemination and enhance the rigor of their work. This notice clarifies reporting instructions to allow investigators to cite their interim research products and claim them as products of NIH funding.

## Definitions

Interim Research Products are complete, public research products that are not final.

A common form is the preprint, which is a complete and public draft of a scientific document. Preprints are typically unreviewed manuscripts written in the style of a peer-reviewed journal article. Scientists issue preprints to speed dissemination, establish priority, obtain feedback, and offset publication bias.

Another common type of interim product is a preregistered protocol, where a scientist publicly declares key elements of their research protocol in advance. Preregistration can help scientists enhance the rigor of their work.

Notes:

- Awardees are not required to create interim research products through their NIH award.
- Applicants are not required to cite interim research products as part of their grant applications.
- Since preprints are not published in peer-reviewed journals, they do not fall under the NIH public access [policy](#).
- This guide notice does not apply to clinical trial registration. See [ClinicalTrials.gov](#) about registration of clinical trial protocols.

## Citing interim research products in applications, proposals and reports

Interim research products can be cited anywhere other research products are cited. These sections include the following:

# Plan U: A proposal to achieve universal access to scientific and medical research via funder preprint mandates

## Plan U would:

- Immediately achieve universal free access to academic research
- Speed research through earlier and wider dissemination of results
- Produce opportunities for new initiatives in peer review and research evaluation

## Introduction

Since its inception the Internet has had the potential to provide free and rapid access to the results of scientific and medical research. However, despite numerous efforts, this potential remains largely unrealized. The incumbent system of research communication has two main problems. It is slow — it typically takes around a year for a manuscript submitted to a research journal to be peer-reviewed, accepted, and published online. And research outputs are not widely accessible — most papers are published in journals available exclusively via subscription to researchers at large universities in wealthy countries.

Previous attempts to address these problems have focused on changing the economics of journal publishing, shifting from subscription journals to publications funded by upfront payments that enable immediate free access to published articles, or on encouraging governments and funders to mandate the deposition of published papers in repositories after an embargo period in which journals continue to charge subscriptions for immediate access.

These efforts have made a growing proportion of the research literature freely and immediately available online, but delays between submission and publication are getting longer, and most published papers remain behind paywalls during the period they are of most value in accelerating research.

## Providing free access via preprint servers

Arguably the most effective mechanism for providing free, immediate access to research has been the non-profit preprint server arXiv. In operation for 28 years, arXiv provides free access to nearly 1.5 million papers in the mathematical and physical sciences, with 140,000 additions each year. Its success has inspired over the past 5 years the launch of numerous discipline-specific servers, including bioRxiv, chemRxiv, and EarthArxiv. Not only do these servers provide immediate, universal access to all papers, they provide this access far earlier than journals, since preprints are typically posted prior to or coincident with journal submission.

The growing popularity of preprints speaks to the desire of authors to share their work with colleagues as soon as they choose to do so and their frustration with the slow pace of the journal publication process. The attention being given to preprints by readers highlights the importance they place on receiving and evaluating newly available information.

The early availability of new research on preprint servers allows other researchers, where appropriate, to begin building on the results immediately; estimates suggest the aggregate time saving could advance the pace of scientific discovery fivefold in 10 years. Preprint posting can also help authors improve manuscripts by allowing them to receive public and

# Disciplinary repositories

This list is part of the [Open Access Directory](#).

- This is a list of OA disciplinary repositories (also called central or subject repositories). Unless otherwise noted, they accept relevant deposits regardless of the author's institutional affiliation.
- This list includes both preprint and postprint repositories.
- When possible, please indicate the institution hosting or maintaining the repository. If a repository only accepts submissions in certain languages, please indicate the languages. If a repository is open in some respects but not others, please include it with an annotation rather than exclude it.
- For a bibliography of works on disciplinary repositories, see the section on [Disciplinary Archives](#) in the OAD [Bibliography of open access](#).
- Related lists in OAD: [Data repositories](#).
- Also see the [Wikipedia list of preprint repositories](#), organized by field or discipline.
- For news about disciplinary repositories, including some newly launched repositories not yet listed here, follow the [oa.repositories.disciplinary](#) tag of the [Open Access Tracking Project](#).
- Wikidata identifier for this page: [Q56229148](#).
- Alphabetical by field.

## Agriculture

- [AgriXiv](#). Preprints for agriculture and allied sciences hosted on [OSF Preprints](#).
- [AgEcon Search](#). Research in agriculture and applied economics. From the [University of Minnesota](#). (Also listed under Economics.)
- [DSpice@ISSR](#). From the [ISSR \(Indian Institute of Spices Research\)](#).
- [ICRISAT](#). International Crops Institute for Semi-Arid Tropics Open Access Repository. From the [ICRISAT](#).
- [Infoteca-e](#). The collections comprise self-edited materials such as books for technology transfer, primers, radio and television programs with information related to the several areas of expertise. Appropriate language is used to ensure that farmers, extensionists, agricultural technicians, students and teachers from rural schools, cooperatives and other sectors of agricultural production are able to assimilate information more easily and, as a result, to appropriate themselves of the technologies developed by Brazilian Agricultural Research Corporation (Embrapa). From the [Embrapa](#).
- [OpenAgri Repository](#). From [Agropedia](#).
- [Organic Eprints](#). From the [Danish Research Centre for Organic Farming \(DARCOF\)](#). All languages.

## The collaborative platform to upload, share and advance your research

Cambridge Open Engage is the new early content platform from Cambridge University Press, designed to provide researchers with the space and resources to connect and collaborate with their communities, and rapidly disseminate early research. The platform is currently under development using a co-creation approach and we're inviting researchers to actively input to help us shape the features and functionality. Register your interest below to stay up to date and to participate in its progress!

### Benefits for researchers

Explore Cambridge Open Engage to:

- ✓ Find and collaborate with peers
- ✓ Discover early and non-traditional OA research
- ✓ Extend collaborative benefits of conferences through to publication

### Benefits for authors

Publish your pre-publication research on Cambridge Open Engage and benefit from:

- ✓ Rapidly disseminate early research
- ✓ Develop and discuss research with peers
- ✓ Get analytics on early research outputs
- ✓ Build an audience for research before formal publication

### Benefits for partners

Societies, conferences, funders and research partners can partner with Cambridge Open Engage to:

- ✓ Gain insights into trends and growth areas within areas of research focus
- ✓ Add to value proposition for members/faculty
- ✓ Get analytics across a range of early research outputs

[cambridge.org/engage](https://cambridge.org/engage)
